Therefore, anyone reading this agreement agrees not to disclose any of the information provided during the internship without notifying & taking the employer's / supervisor's approval.

Internship Title:

Front-end Developer

Company / Organization Name:

Tera Smart Solutions

Introduction:

The main purpose of this report is to summarize my internship experience. To give background information and the lessons and skills learned. Also to reflect on the experience and knowledge gained during the internship. The objective out of performing this internship in Tera Smart Solutions was to gain hands-on experience and learn and enhance professional skills. The report is structured as follows, first I will give a description of the company, and then I will discuss the tasks and activities conducted during the internship. After that I will give an evaluation of the internship. Finally I will give a summary of the key conclusions derived from the internship experience.

Company / Organization Description:

Early in 2021, Tera Smart Solutions was founded as a startup business, providing both large and small-scale IT solutions. It offers software development that aids numerous domains in conceptualizing, creating, putting into practice, and deploying their intended solutions. A speech system for airports was introduced by the corporation. AVS works on the principle that the most effective announcement is recorded and repeated using various calls. By doing this, they were able to rule out all potential common errors and create a very clear announcement messages.

Internship Performed Tasks:

The tasks were to help in developing new user-facing desktop GUI features. In a typical working day I would receive a task from my supervisor, for example an assigned task was to assure that all user input is validated before submitting to back-end. I had to write clean, reusable, understandable, and maintainable code. I worked with the development team. During the tasks I was also supported by senior developers whenever I needed help. The tools used were JavaFX, visual studio code as the editor for writing the code. Git and Github were also used for version

control and for merging the code. I had to do some research about JavaFX syntax and whenever errors occurred.

Internship Evaluation:

I gained from the internship problem solving skills and also to ask questions whenever there was any unclear information. I gained teamwork skills. I also gained communication skills, how to communicate my point of view effectively. The internship met my expectations, during the internship I spent time improving and sharpening the skills I already possessed and by the end of the internship I had new and improved skills. The internship will influence my future career path by giving me a better idea of the appropriate way to behave as a professional by observing the workplace culture and office environment. Some of the internship activities were similar to activities I did during the project in the advanced computer lab. The most related course to the internship was the advanced computer lab in the fourth semester. We also did a GUI for the game in Java but using a different library. I would recommend this company to other GUC students.

Conclusion:

In conclusion, the internship was a useful experience. I got hands-on experience; I gained new knowledge and skills and how to apply them in real life projects. I also gained an understanding of the work environment and how to behave as a professional. The industry the company operates in is intriguing and inventive.
