This agreement is to acknowledge that the information provided by any company / organization during the internship is unique to this business and confidential.

Therefore, anyone reading this agreement agrees not to disclose any of the information provided during the internship without notifying & taking the employer's / supervisor's approval.

Internship Title: Backend Developer

Company Name: Terasmart Solutions

Introduction:

In the following report, I will go over the tasks, my typical working day, and whether this internship helped me hone my skills to improve as a programmer and a student. Enrolling in this internship was intended to be a milestone for me as a software programmer and guide me to improve my academic level and experience.

Description of the company/organization:

Terasmart solutions is a startup company established in early 2021 that offers small and large-scale IT solutions. It provides software development that helps multi-faceted domains conceptualize, develop, implement, and deploy their desired solutions.

The company introduced an airport voice system. The idea behind AVS is that the best announcement is recorded and repeated using different calls. Through this, we have excluded all common mistakes that can happen and produced a perfect clear announcement.

Internship activities:

During this internship, I was assigned to develop the backend of an application that automates airport announcements using recorded voice lines.

On an average day, I take my daily task from my supervisor and go to my designated office to work on my task and ask him if I encounter any problems.

I used Python and Visual studio code on my laptop.

Most of my learning experience was through researching the given tasks and asking for help when the problems exceeded my experience.

Internship evaluation:

I learned the basic skills I need to code with Python; in this internship, I realized what needs to be considered while making an application. Looking back at what I have learned, this internship has met my expectations and was worth my time and effort, and I would recommend it to a colleague in my major. I have gained experience with backend development that will aid me in my studies at the university and in future jobs. Almost all of the internship work was coding based, which falls under the scope of my major.

Conclusion:

Finally, I learned the basic skills of creating an application using Python and how to cope in a working environment and work with colleagues to finish the given tasks. The sector that the company works in is interesting and innovative, which will be a great step towards overcoming confusing and wrong announcements.
