Part III. INTERNSHIP REPORT – STUDENT'S INPUT

- This report has to be prepared by the student, it must be prepared and written in a **computerized** format, submitting the report in hand written format will not be accepted.
- Kindly refer to the Internship Report writing Guidelines on the GUC intranet – SCAD office folder.
- This report will be reviewed and evaluated from internal faculty members.

Internship Title: Full stack software development

Company / Organization Name: Lyra Analytics

Introduction: This report Aims to give an over view of the held internship at Lyra Analytics . The objective of this internship was to enhance both my technical and communication skills , And to introduce myself to a new business model which is outsourcing. The nature of the company as a startup allowed for rapid experience gain both from a technical perspective and in my soft skills . This report will include an overview of the following. First the organization description, the performed tasks within the company , an evaluation of the internship and finally a conclusion .

Company / Organization Description: Lyra was a startup at the time of the internship so the scale of the team was not large . team at that time did not exceed 20 people . Lyra is an outsourcing solution where lyra matches talents to a client . This business model is really simple ; for example if you are a client that have an unfished product or even a new one that should be implemented, so that client will come to Lyra asking for teams of talents satisfying his job description. The matching was based on machine learning and NLP . Done using comparing a talent cv to the job description given by the client and the results were in percentages representing how much of a match is it.

Internship Performed Tasks: Tasks I performed at lyra could be categorized under full-stack development. To start of ,the first task was to build an online exams module that was integrated with lyra's website this exams module contained specific questions to evaluate a talent before it's accepted into our database . The questions were customized and dynamic for each filed the talent is being tested on . Fileds included Ai . Machine learning and Data Analysis . The results of the test was announced automatically and a talent will be accepted or rejected depending on that metric . This task included both frontend using React js and the backend using firebase . Another task was to re design lyra's whole data base structure using a no sql data base . The choice settled on google firebase and the design was accepted and implemented . Further tasks related to React and flask were given during my internship period

Internship Evaluation: Skills gained from this internship could be summarized in the following . Technical skills in react , javascript , flask , no-sql database , machine learning ,Apis integration , and for the soft skills most of them was new to me as it was my first time to work in an agile work environment and being introduced to new terminologies like scum , stand-up meeting . This knowledge was really useful further on to adapt to the new working standards . Which I find really useful for the market right now , and for future job offers . The coursed I found most useful during the internship were database 1 and 2 coursed and all CS courses .

Conclusion: In conclusion, this internship has been a very useful experience for me. I can safely say that my understanding of the job environment has increased greatly ,also increased understanding of the nature of software project and specially startup projects and work environment ,Furthermore working within agile environment really increases the teamwork aspect and encourages fast deployment . However, I do think that there are some aspects of the job that I could have done better and that I need to work on. I need to do more effort in applying correct communication principles .

Please rate your satisfaction with the internship experience.

☑ Very satisfied   ☐ Somehow satisfied   ☐ Neutral   ☐ Somehow dissatisfied   ☐ Very dissatisfied

Would you recommend this internship to other colleagues?

☑ Yes   ☐ No   ☐ Maybe
